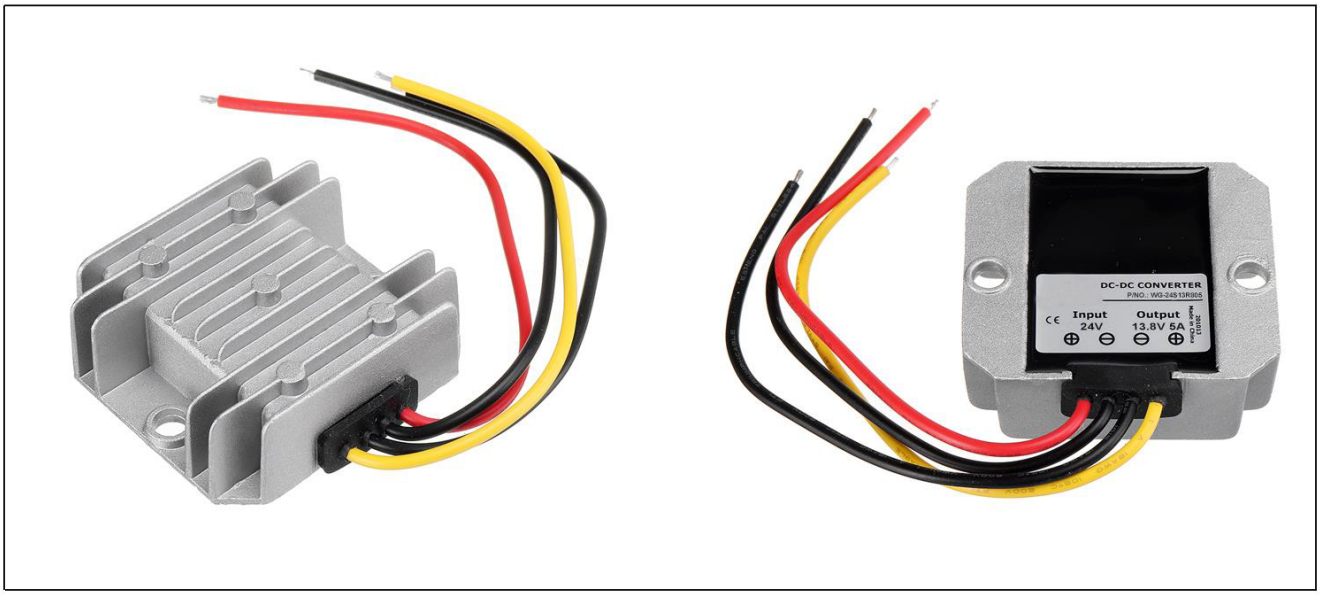
Non-Isolated DC/DC Converter Specification

Model No.:WG-24S13R805

Version No. 1.0

Input voltage	Output voltage	Output current	Output power	Efficiency	Size
18-36V DC	13.8V DC	5 Amps	69 Watts	94%	64*57*22mm



The WG-24S13R805 is a Non-isolated DC-DC converter that uses a synchronous rectification technology, and features high efficiency and power density. It has the dimensions of 64mm x 57mm x 22mm (2.52 in. x 2.24 in. x 0.87 in) and provides the rated output voltage of 13.8V and the maximum output current of 5A.

Features

- Design meeting RoHS / CE
- High efficiency: 94% (@ 24Vin, 25℃)
- Remote ON/OFF control（optional）
- Input transient absorption protection
- Support -40 °C environment
- 100% full load burn-in test
- Short circuit, Over load, Low voltage protections
- Waterproof level IP68
- 1 Years warranty

Applications

- Industrial
- Alternative Energy
- Golf Cart & Forklift
- Military
- Electromotor
- Telecommunications
- Boat & Yacht
- LED Marketplaces and so on.

Model naming method

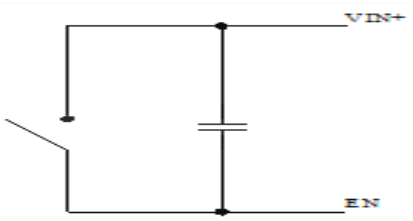
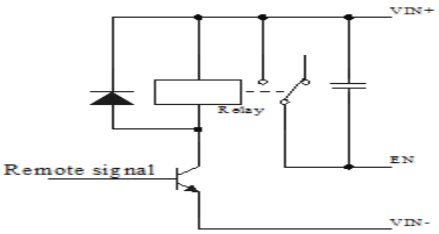
Various circuits for driving the EN



Simple control



Transistor control

Input Undervoltage Protection

The converter will shut down after the input voltage drops below the under voltage protection threshold for shutdown. The converter will start to work again after the input voltage reaches the input under voltage protection threshold for startup. For the Hysteresis, see the Protection characteristics.

Output Overcurrent Protection

The converter equipped with current limiting circuitry can provide protection from an output overload or short circuit condition. If the output current exceeds the output overcurrent protection set point , the converter enters hiccup mode. When the fault condition is removed, the converter will automatically restart.

Wiring Instructions

The input and output of this product are terminals. The user should ensure that the input and output wires and terminals are connected reliably , and pay attention to the wire diameter to meet the requirements of the power supply current. If the cable to be used is long, it needs Considering the voltage drop of the wire, if the voltage drop is too large, the voltage output at the load end may not meet the load demand. In this case, consider using a thicker wire diameter or reducing the length of the wire. Generally, if long wiring is required. Long line should be used on the side where the current is relatively small. For example, this product is a step-down product, so long lines should be used on the input side.

Thermal Consideration

Sufficient airflow should be provided to help ensure reliable operating of the WG-24S13R805.

Therefore, thermal components are mounted on the top surface of the WG-24S13R805 to dissipate heat to the surrounding environment by conduction, convection and radiation. Proper airflow can be verified by measuring the temperature at the middle of the base plate.
